01 / YOUR LIGHT AT A GLANCE

Colourful Nordic Up & Down Wall Light

This wall light has two painted cup-shaped shades facing in opposite directions. Each light position uses a replaceable bulb, while the mixed colourways make it useful to check the entire fitting against the order before marking the wall.

FORM
Two opposed cup-shaped shades

COLOUR CHOICE
Seven mixed colourways

BODY
Painted iron

BULB BASES
Two E27 positions

MOUNTING
Wall fitting

Match the full colour combination on your order, not just one shade colour. Compare the delivered height of both fittings when preparing a pair.

Opposed painted cups

The two shades face upwards and downwards around the bulb positions. Protect their edges and avoid twisting them during bulb fitting.

Central arm

The arm connects the shade assembly to the wall body. Hold the main fitting without using either cup as a lever.

Round wall plate

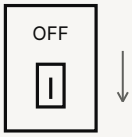

The circular visible plate completes the colour combination at the wall. Its outline is separate from the concealed fixing-hole arrangement.

Plan for light above and below

Measure the delivered fitting's total height, including the intended bulbs, and its projection from the wall. Check the space above and below both shades and the nearby path of doors or curtains. For a pair, mark a common reference line and compare the bulb positions as well as the wall plates.

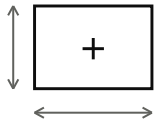

COLOURFUL NORDIC UP & DOWN WALL LIGHT

Prepare & fit

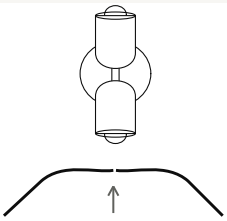

Before fitting

Switch off the lighting circuit at the consumer unit and verify it is dead. Electrical connections and testing must be completed by a competent installer. Keep the light supported until it is securely fixed.

01 Check the position

02 Support the body

03 Check before use

Match every colour component

Compare the shades, arm and backplate with the ordered colour combination in daylight. For two or more lights, lay them side by side before the installer starts marking the positions.

Check both bulb positions

Check the markings on both E27 holders and the dimensions of the intended bulbs. Keep the globes away from the painted cup edges while confirming their physical fit.

1 Set the vertical alignment

Agree the wall position with the cups facing in their intended up-and-down arrangement. Compare their alignment with door frames and mirror edges rather than relying on the wall plate's round outline.

2 Prepare the actual wall attachment

Identify the delivered mounting parts and assess the wall material before selecting fixings. Keep the painted body protected while suitable fixing positions are selected from the actual hardware.

3 Support the centre of the fitting

Hold the central body while the installer positions it at the wall, keeping pressure off both cups. Once secured, fit suitable bulbs by turning the bulbs without twisting the shades.

4 Check the two ends

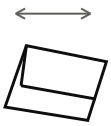

Before use, inspect the upper and lower bulb positions from the side. Confirm that neither bulb is forced against a cup and ask the installer to check any visible tilt.

COLOURFUL NORDIC UP & DOWN WALL LIGHT

Use & look after

Treat the two bulbs as a pair

The light uses two E27 bulbs. For a balanced appearance, choose matching light colour and bulb shape within the holder limits. Switch off and allow both bulbs to cool before replacement. Hold the fitting steady while turning a bulb, without rotating its painted cup or bending the central arm.

Dust the painted cups

Use a soft, dry cloth on the cool fitting. Avoid abrasive cleaners and metal polish, and keep fingers away from the cup edges when applying pressure.

Clean the visible bulbs gently

Let the bulbs cool completely before dusting their exposed surfaces. Keep the fitting steady and avoid pulling on the glass or using it as a handle.

If something needs attention

The upper and lower light differ	Switch off and let both bulbs cool, then compare their marked colour and type. Matching E27 bases alone do not ensure the same light appearance.
One bulb does not light	After cooling, check that bulb using the access shown by the installer. If a correctly specified replacement also fails, leave the light off and request help.
A shade turns while fitting a bulb	Stop before applying more force. Ask the installer to inspect the shade and holder; do not tighten the bulb by gripping and turning the painted cup.

BEFORE SWITCHING ON

- ✓ Fitting secure
- ✓ Fragile parts stable
- ✓ No trapped cable
- ✓ Electrical checks complete
