01 / YOUR LIGHT AT A GLANCE

# Nova LED Wall Light

Nova is a compact wall light with a curved aluminium face and built-in LEDs. Its upper and lower light openings need to remain clear, while the small body benefits from careful positioning against nearby furniture and wall details.

COLOURS
Golden, Black, Coffee or Grey

BODY MATERIAL
Aluminium

DIFFUSER MATERIAL
Acrylic

LIGHT SOURCE
Built-in LED

LIGHT DIRECTION
Up and down

Match the ordered finish before marking the wall. For a pair, place both lights together in daylight and compare their body size and visible finish.

### Curved aluminium face

The rounded metal face forms the visible body. Hold this gently during handling without pressing tools against its finish or edges.

### Upper light opening

The upper opening directs light towards the wall above. Keep packing material, dusting tools and nearby fabric out of this area.

### Lower light opening

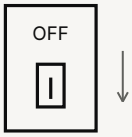

The lower opening directs light below the fitting. Its light surface needs protection from pressure and from objects pushed inside.

### Leave both light openings clear

Measure the actual fitting's height, width and projection, then check the intended position against shelves, curtain movement and door frames. Consider the wall space above and below the light as well as the body itself. For a pair, use a shared reference line and check the view from across the room.

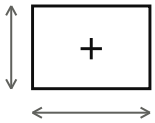

NOVA LED WALL LIGHT

# Prepare & fit

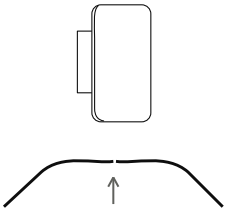

### Before fitting

Switch off the lighting circuit at the consumer unit and verify it is dead. Electrical connections and testing must be completed by a competent installer. Keep the light supported until it is securely fixed.

01 Check the position

02 Support the body

03 Check before use

### Inspect the face and openings

Check for dents in the metal, cracks in the light surfaces and loose material inside the openings. Keep damaged or obstructed fittings out of the installation until they have been assessed.

### Check the existing wall point

Assess the wall and the space at the connection point using the actual fitting. Its small body should not be assumed to conceal every previous wall opening or decoration mark.

### 1 Agree the finished position

Use the actual body's outline to choose the height and orientation. Check the upper and lower light openings against nearby furniture and fabrics before the installer marks the fixing locations.

### 2 Identify the delivered attachment

Identify the mounting hardware and its engagement with the body before lifting the light into position. Keep the diffuser protected; do not prise the curved face open to investigate.

### 3 Keep openings free during fitting

Handle the outer body while the installer secures it, keeping fingers and tools out of the light openings. Remove loose packaging from the working area so it cannot become lodged in the fitting.

### 4 Check the body from both sides

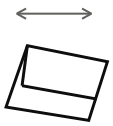

After installation, look along the upper and lower edges for tilt or distortion. Report any new mark, crack or unexpected gap to the installer before putting the light into normal use.

NOVA LED WALL LIGHT

# Use & look after

### An integrated LED fitting

Nova has built-in LEDs rather than a replaceable screw-in bulb. Use the normal control demonstrated by the installer and keep the upper and lower openings unobstructed. If the light develops a fault, leave the body closed and contact LUNARIA with the order details and a description of the behaviour.

### Dust the aluminium face

With the light off and cool, wipe the face with a soft, dry cloth. Avoid metal polish and abrasive pads on the finish.

### Clean around the openings

Dust the accessible edges lightly without inserting tools into the body. Do not spray liquid into either opening or press on the acrylic light surface.

## If something needs attention

| | |
|---|---|
| One direction looks darker | From a safe position, check whether furniture or fabric is blocking an opening. If it remains uneven, switch off and send LUNARIA a photograph. |
| The light flickers | Leave the fitting switched off and note the control being used. Ask the installer to assess the light and control; do not remove the curved shell. |
| The face looks loose or distorted | Stop using the fitting and ask the installer to inspect it. Do not push the curved face into place or tighten an unidentified screw. |

BEFORE SWITCHING ON

- ✓ Fitting secure
- ✓ Fragile parts stable
- ✓ No trapped cable
- ✓ Electrical checks complete
