01 / YOUR LIGHT AT A GLANCE

Orla Semicircle Wall Light

Orla places a white plastic globe in front of a coloured semicircle plate. Two sizes and six finishes share this graphic form, with a warm-white G9 LED bulb included; choose the wall position using the actual size you ordered.

SMALL OPTION
20 × 16 cm

LARGE OPTION
28 × 20 cm

GLOBE
White plastic

LIGHT SOURCE
One warm-white G9 LED bulb included

FINISHES
White, Black, Dark Green, Red, Yellow, Pink

Check both size and colour. Pink has a warm peach-orange appearance; keep the mounting parts for each size with its own fitting.

Semicircle plate

The flat coloured metal plate forms the graphic outline behind the globe; support its body when handling the light.

White globe

The rounded plastic globe sits forward of the plate and covers the bulb area; protect it from scratches and pressure.

Rear mounting cup

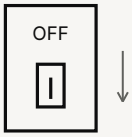

A round cup sits behind the plate at the wall; keep the cup and mounting components with the correct size.

Plan the semicircle and the projecting globe

Use a paper outline of the chosen size to position the plate beside a mirror, console or headboard. Check the projecting globe against opening doors and the route people walk through. For a pair, mark both centres from the same reference before fitting, then check the intended appearance from the room entrance.

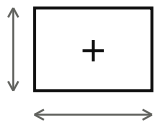

ORLA SEMICIRCLE WALL LIGHT

Prepare & fit

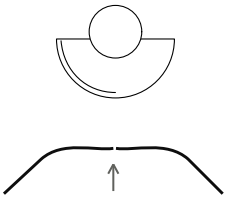

Before fitting

Switch off the lighting circuit at the consumer unit and verify it is dead. Electrical connections and testing must be completed by a competent installer. Keep the light supported until it is securely fixed.

01 Check the position

02 Support the body

03 Check before use

Sort by size and colour

If fitting several Orla lights, lay each on separate padding with its own components. Check the order labels before starting; the two sizes have different rear cups and should stay separately organised.

Protect the globe

Inspect the globe and painted plate for cracks, chips or scratches in good light. Keep tools and loose screws in a tray so they cannot roll against the plastic surface.

1 Confirm the chosen outline

Hold the paper outline at the intended position and check both the plate and globe clearance. Agree the orientation before marking the fixing points from the actual fitting's components.

2 Assess the wall and rear cup

Examine the wall support and the mounting components for your chosen size. Keep these components together, using the actual arrangement to determine the fixing positions for that particular fitting.

3 Lift by the plate body

Support the semicircle body while the light is prepared and raised. Keep your grip off the globe, and do not twist the globe to move or align the complete fitting.

4 Inspect the finished front

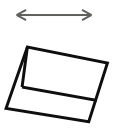

Before use, check that the plate sits steadily and the globe is stable with no visible damage. For a pair, compare the agreed centres without trying to rotate an already secured fitting.

ORLA SEMICIRCLE WALL LIGHT

Use & look after

An included warm-white G9 bulb

Orla uses one warm-white G9 LED bulb and is supplied as non-dimmable. The globe is plastic and should be handled gently whenever the light is serviced. Keep the bulb specification for replacement, checking the fitting's limits. Switch off and let it cool before using the globe-access method established during installation.

Use a soft cloth on the globe

Dust the cool plastic globe with a soft, dry cloth. Avoid abrasive pads, solvents and heavy pressure, which can mark the surface.

Protect the painted plate

Wipe the semicircle plate gently while supporting the body. Do not spray cleaner behind it or pull the globe to reach around the edges.

If something needs attention

Two lights do not line up	Check the centres against the original layout and confirm both ordered sizes. Ask the installer to adjust positioning; do not rotate the secured body by its globe.
The globe is scratched or cracked	Leave the light off if the globe is cracked or unstable. Photograph the damage for LUNARIA; do not polish abrasively or attempt a glued repair.
The bulb needs replacement	Switch off and allow the light to cool. Use the confirmed access method and a compatible G9 LED; do not guess the globe's release direction.

BEFORE SWITCHING ON

- ✓ Fitting secure
- ✓ Fragile parts stable
- ✓ No trapped cable
- ✓ Electrical checks complete
